

UCSF Liver Center Seminar Series

Liver Center Guest Speaker

Wednesday, June 22, 2016 | 8:00am - 9:00am
Parnassus Campus | Room S-214

New Technologies For Liver Replacement

Alejandro Soto-Gutierrez, MD, PhD

Assistant Professor, Department of Pathology, University of Pittsburgh

Dr. Soto-Gutierrez's research is focused on the development of new technologies for organ replacement using regenerative medicine approaches to generate entire replacement organs. Dr. Soto-Gutierrez's laboratory used the structural connective tissue of discarded livers as a scaffold for growing new liver tissue for transplantation and primary liver isolated cells.

Host– Holger Willenbring, MD, PhD
