

## LIVER CENTER SEMINAR

**Wednesday, June 14, 2017**

**9:00-10:00 AM**

**S-214, Parnassus Campus**

**Michael Oertel, PhD**  
Assistant Professor of Pathology  
University of Pittsburgh

### **Cell Transplantation Studies in Fibrotic Livers**

Dr. Oertel's research focuses on the development of cell-based strategies to replace injured hepatic tissue mass and restore liver function. His lab has established cell transplantation models in rats to study the mechanism(s) of tissue replacement by stem/progenitor cells or mature hepatocytes under non-selective conditions and in liver environments that resemble human disorders.

Host: Holger Willenbring, MD, PhD
